

souvenir: baua telescope

S o u v e n i r f o r a r c h - w a t c h i n g

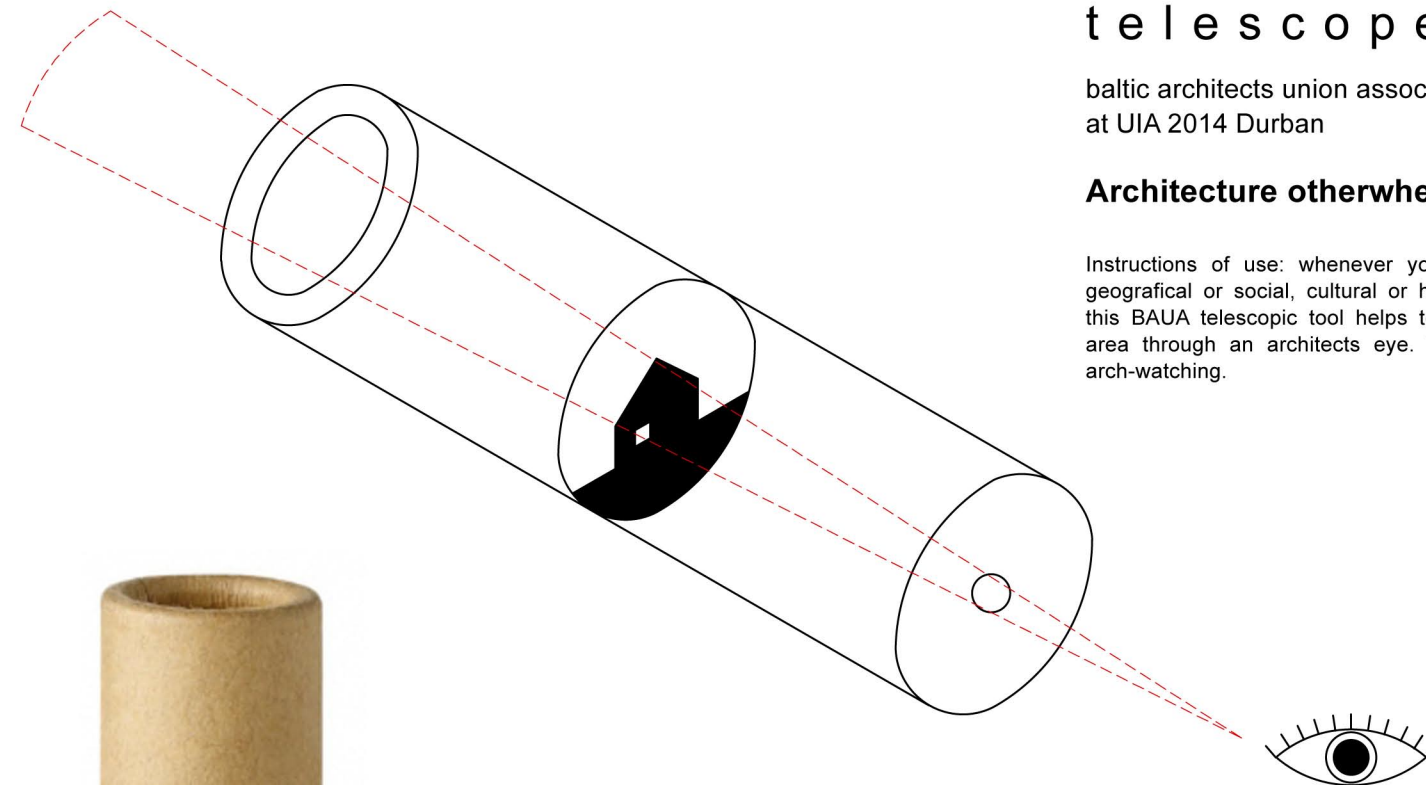

BAUA
telescopebaltic architects union association
at UIA 2014 Durban**Architecture elsewhere**

Instructions of use: whenever you found in a geographical or social, cultural or historical place this BAUA telescopic tool helps to observe the area through an architects eye. This is called arch-watching.

The souvenir takes the main idea of the stand: arch-watching. Here comes a scaled **telescope, made of 30mm diameter and 100mm length cardboard tube**. In the ends it has two holes, that permits to watch through. Inside the tube the cutted paper silhouette is included.

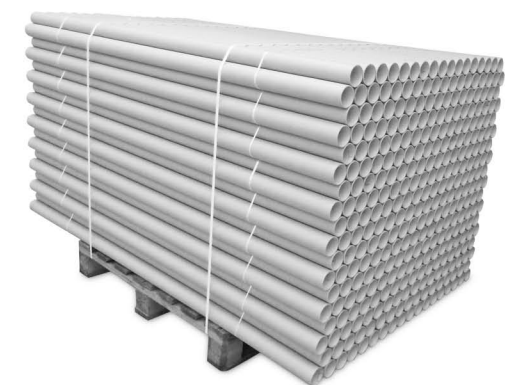

Outside it is possible to have the written label, that informs the object and gives an instruction of use in order to make a souvenir more entertaining (also ironic someway) and necessary for the "architecture elsewhere" observation.

The baua telescopic tube for the architecture watching.
Environmentally friendly packaging.

∅ 30 , 100 m m

T r a n s p o r t a t i o n

The selected materials like cardboard and plywood are very common and economic in almost any part of the world. There could be several options for transportation and organisation for the necessary materials:

1. make an order for cardboard tubes (including souvenirs) and send to final destination by post;
2. make an order in origin place of UIA congress;
3. combined mode.
